

# EDNET Faculty Training Workshop

## An EDNET Game 4 U

A professional development Game is provided below. The process of the game is important as well as the content.

### Game # 1

#### *The Family Timeship Game*

#### Learning Performance Objective:

Using what you know about college life today and your knowledge about new developments in information technology, describe what a college education will be like when your youngest family member is your age today. So if you have a 5 year old at home and you are 30 (don't you wish?!); in 25 years your little one will be as old as you are today. What will education be like then? Join with several others around you to complete this activity.

*What is your age today? (no one will look)*

*How old is your youngest family member today?*

*In what year will this youngest family member be your age (today)?*

List the different ways available today to transmit information such as the telephone and computer.

1	1960 ?	Description of the technologies available today that are used in education

Check how many of these information technology tools were widely available in 1960.

Describe what the college campus will look like when your family member attends in the year when they are your age today.

Would you believe it!
